Data book

For child data from the 1989-95 cohort

Data book for the Child dataset of the 1989-1995 cohort after completion of Survey 5

This work is copyright. Permission to use or reproduce material in this book for the purpose of free distribution is not required, provided that proper acknowledgement of the source is given. Acknowledgements

This study is funded by the Australian Government Department of Health. This document was prepared by David Fitzgerald and Ingrid Aulike, with help from the data management group of the Australian Longitudinal Study on Women's Health (ALSWH) at the Universities of Queensland and Newcastle. The research team would like to thank all participants who contributed to the project.

Notes

As of 2019, there were 1,814 births recorded by 1,231 women of the ALSWH 1989-95 birth cohort. There were 759 women with a single child, 378 women with two children, and 94 women with three or more children.

The data presented in this data book were from surveys 2, 3 and 5 of the 1989-95 cohort. Surveys 2 and 3 asked about the children's dates of birth, gestation and the number of months breastfed. Survey 5 asked about these as well as other questions as shown in this data book, such as baby weight. The women who answered survey 2 or 3 but not survey 5 could not give the extra information asked in survey 5, such as baby weight, and so these items have a higher missing rate of more than 500. The gestation and breast feeding questions have a lower missing rate because they were asked in all the surveys.

The frequencies in this data book have not been weighted.

For more information on these data refer to the ALSWH website (http://www.alwsh.org.au/). The ALSWH website has general information about the project; the investigators and staff; publications and presentations; information for participants; surveys; and information for potential data users.
